

CHAINS/CABLES

Chaining or cabling scrap tires together or to fixed structures can serve as a deterrent to theft. This approach to securing scrap tires offers flexibility when outside storage space is limited.

SECURITY CAMERAS AND SIGNAGE

In combination with fencing, portable containers and chains/cables, security cameras and proper signage discourage scrap tire theft.

Security Measures to Prevent Scrap Tire Theft on Premises

FENCES

Storing scrap tires in a fence serves as a safety and security measure. Fencing the scrap tires can deter intruders on your property.

PORTABLE CONTAINERS

Mobile minis, pods and trailers are designed with locking mechanisms to protect against theft and loss. 20 ft mobile minis and POD shipping containers hold 1,240 cubic feet of storage volume. This volume is estimated to hold 300 passenger car or light truck scrap tires.
